

Drum Clamp

Drum Clamp - Forklifts are actually meant to move, lift and store items placed on pallets. For businesses which use drums, they often need an attachment in order to deal with lifting, moving and storing them. There are several various attachments which a company could use for all your drum lifting, moving, and storing needs. These attachments are particularly utilized to handle drum containers - thus there is no risk of damage to the item or drum container when they are moved, lifted or stored.

Drum Positioner And Grab

The drum positioner can be utilized in order to load and unload drums off of drum stands, vehicles and racks. These are offered in three and four tine models. This particular accessory is completely mechanical, hence allowing the individual operating it to be able to operate all from the comfort of the lift truck seat. Able to move steel, large and extra large plastic drums, its capacity is 210 liters. This particular accessory is utilized for drum pyramid stacking.

The drum grab can be mounted to the forks, with a designed objective of dealing with metal drums which have rolling hoops. Although the initial purpose for the design was to deal with steel drums with rolling hoops, the drum grab could help accommodate plastic drums too. Drum capacity maximum is 220 liters for plastic barrels and 210 for steel drums with rolling hoops.

The Rotator

The drum rotator is actually a lift truck attachment that mounts on to the forks themselves. The objective of the drum rotator is to pick up the drum and rotate it upside down. The drum fits in to the rotator utilizing a steel clamp which fits over the middle of the drum. The rotation is done by either a crank handle or a continuous loop chain. The crank handle is intended for operations that happen beneath shoulder level. For operations which should take place above shoulder level, the continual loop chain will be utilized.

Drum tines are straightforward fork mounted attachment which could be used for unstacking or stacking 210-liter steel drums. Stacking requires nothing fancy, merely easy horizontal positioning of the drums. The carriage-mounted accessories lessen the load center of the drums.

Automatic Tongs

Drum tongs are available in automatic and semi-automatic versions. They are for use in the open topped or tight head steel drum kinds. The drum forceps can be connected in several ways to the forklift. One method is to connect them underneath a fork-mounted hook. One more way is to attach them to a carriage mounted jib or a fork-mounted jib. Both the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no need for the one operating it to ever leave the seat of the forklift.

Rim Grip Handler

The Rip Grip Drum Handler is the best option for forklift accessories, when there is a need to store drums with inadequate area accessible. This particular accessory could be used on both one hundred twenty liter and two hundred ten liter drums. The Rim Grip Handler operates by utilizing steel jaws in order to hold the edge of the drum. It picks the drum up and sets it down without requiring any room between all the drums. The standard model utilized in the business is a zinc-plated handler, though, this particular accessory comes accessible in stainless steel for the food and drink industry.
