

## Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a device made out of high quality materials intended to endure the most challenging procedures and work environments. This piece of equipment could enable drivers to control the blades hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the arms or the entire load in order to facilitate much more accurate carrying and placement in a quicker and much more effective manner.

The unique blade pocket design could enable operators to securely sway the unit's blades without any fear of destroying the positioning cylinders. This could allow the worker the choice to either perform independent or simultaneous blade movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into fork positioners on available units.
